MonaLisa Touch[®]

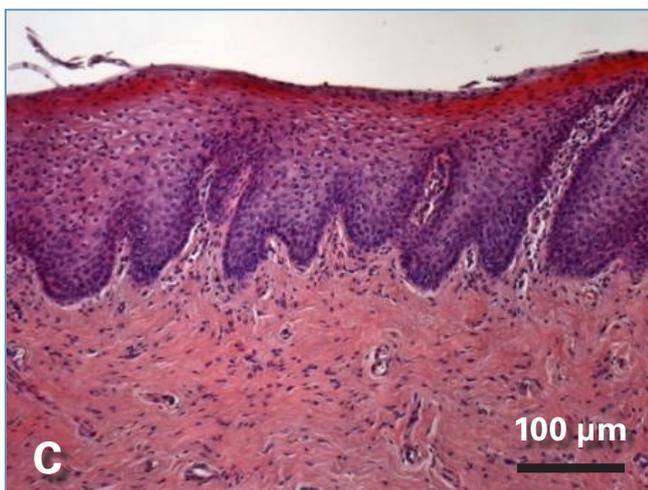

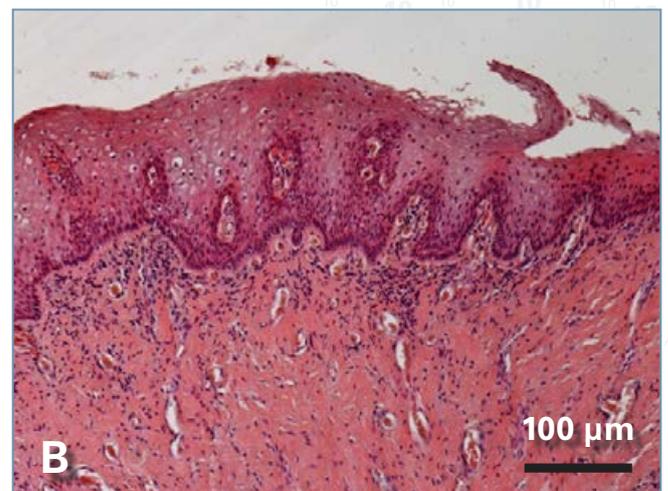

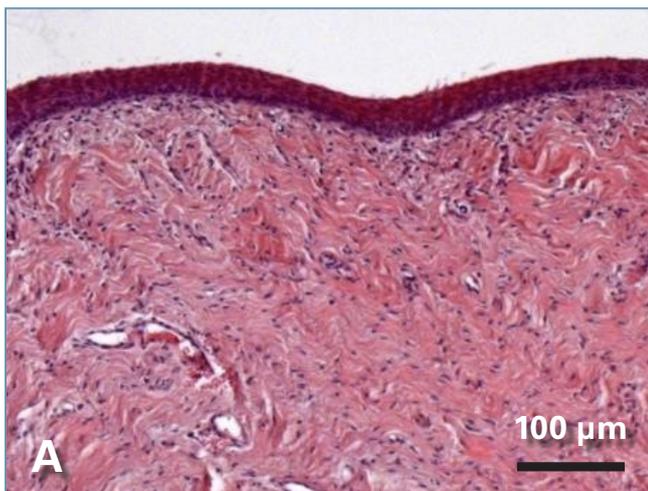

The Code of Excellence

Histological preparation of vaginal mucosa sections stained with haematoxylin and eosin (H&E)

Patient Data - ID: 1

Age: 54 - **Age at menopause:** 44 years old

Note: The patient has never used HRT

(A) Vaginal mucosa in the basal condition with a thinner epithelium typical of atrophic vaginitis.

(B) The same patient one month after the 1st *MonaLisa Touch*[®] session. It is evident the thicker epithelium of the mucosa.

(C) The same patient one month after the 2nd *MonaLisa Touch*[®] session. It is possible to observe a further thickening of the mucosa epithelium.

Histological preparation of vaginal mucosa sections stained with haematoxylin and eosin (H&E)

Patient Data - ID: 1

Age: 54 - **Age at menopause:** 44 years old

Note: The patient has never used HRT

(A) Vaginal mucosa in the basal condition with a thinner epithelium typical of atrophic vaginitis.

(B) The same patient one month after the 1st *MonaLisa Touch*[®] session. It shows considerable thickening of the epithelium.

(C) The same patient one month after the 2nd *MonaLisa Touch*[®] session. This figure illustrates a further thickening of the epithelium.

Professor of Histology and Embryology at the University of Pavia, Italy

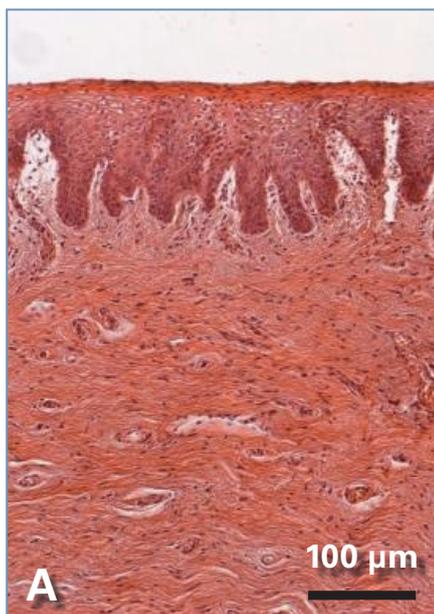

Pictures magnification 100x

Histological preparation of vaginal mucosa sections stained with haematoxylin and eosin (H&E)

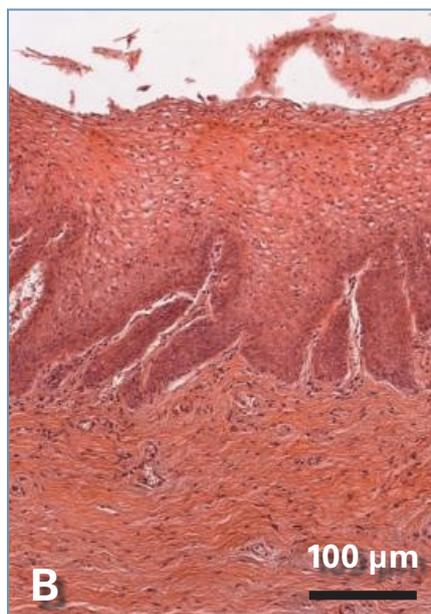

Patient Data - ID: 2

Age: 59 - **Age at menopause:** 48 years old

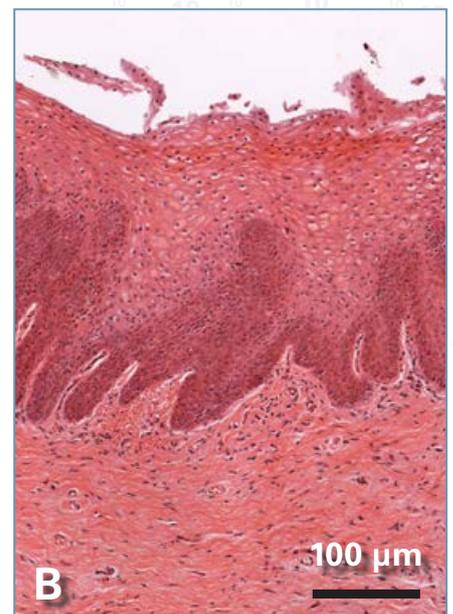

Note: The patient has never used HRT

(A) Vaginal mucosa in the basal condition. It shows a thinner epithelium and the presence of papillae. This morphological picture indicates vaginal atrophy at an early stage, gradually evolving towards a condition characterized by an epithelium formed of few cell layers and no papillae.

(B) & (C). The same patient one month after the 1st *MonaLisa Touch*[®] session **(B)** and the 2nd session **(C)**. The much thicker epithelium and shedding of considerable big cells from the free surface, together with the larger diameter of epithelial cells rich in glycogen, demonstrate the restored metabolic trophism and dynamics of the whole epithelium.

Pictures magnification 100x

Histological preparation of vaginal mucosa sections stained with haematoxylin and eosin (H&E)

Patient Data - ID: 4

Age: 63 - **Age at menopause:** 49 years old

Note: The patient used HRT for 6 years, up to 55 years old

(A) Vaginal mucosa in the basal condition with a thinner epithelium typical of atrophic vaginitis.

(B) The same patient one month after the 2nd *MonaLisa Touch*[®] treatment session. The picture shows evident thickening of the epithelium.

Professor of Histology and Embryology at the University of Pavia, Italy

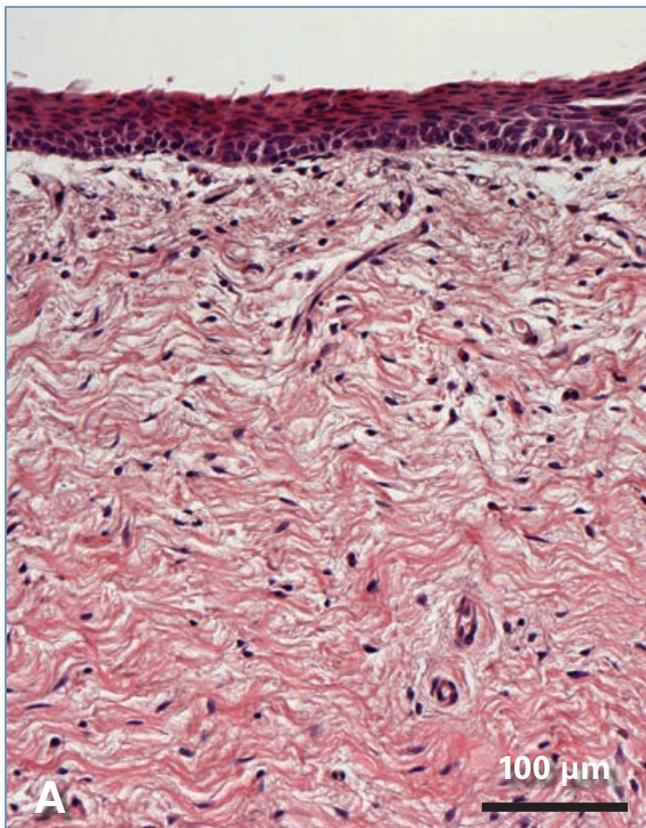

Pictures magnification 100x

Histological preparation of vaginal mucosa sections stained with haematoxylin and eosin (H&E)

Patient Data - ID: 5

Age: 54 - **Age at menopause:** 53 years old

Note: The patient has never used HRT

(A) Vaginal mucosa in the basal condition with a thinner epithelium typical of atrophic vaginitis.

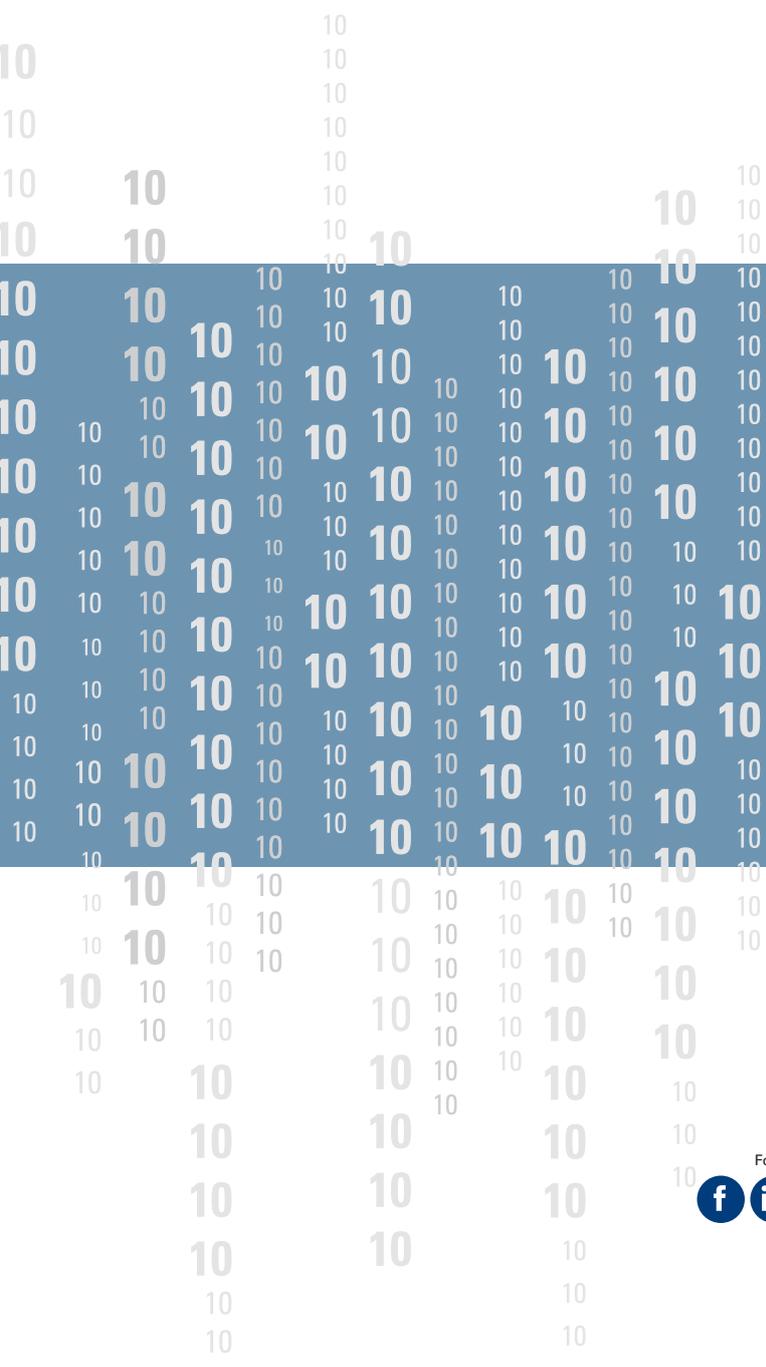

(B) Vaginal mucosa of the same patient one month after the 2nd *MonaLisa Touch*[®] session. The much thicker epithelium and shedding of numerous big cells from the free surface, together with the larger diameter of epithelial cells rich in glycogen, demonstrate the restored metabolic trophism and dynamics of the whole epithelium. Remark the connective tissue papillae projecting deeply into the underside of the epithelium.
